Education

University of Illinois Chicago | Chicago, IL Aug 2024 – May 2026 (Exp.)
Master of Science in Computer Science | GPA: 3.7 / 4.0
Savitribai Phule Pune University | Pune, India Jul 2017 – Apr 2021
Bachelor of Engineering in Computer Engineering | GPA: 3.9 / 4.0

Skills

Frontend: React, TypeScript, React Native, Electron, Redux, D3.js, Three.js, Material-UI, Tailwind CSS, SASS
Backend: Node.js, Express.js, MySQL, PostgreSQL, MongoDB, AWS EC2
Testing: Playwright, Cypress, React Testing Library, Jest
DevOps/Tools: Git, Webpack, Expo, Cube.js, Vite, Rollup, CircleCI, GitHub Actions

Professional Experience

University of Illinois Chicago | Graduate Research Assistant | Chicago, IL Dec 2025 – Present
• Spearheaded migration of a legacy Expo-based React Native app to TypeScript and NativeWind, resolving 15 state and navigation issues that caused runtime crashes and delivering a stable, maintainable platform.
• Implemented a comprehensive digital marketing strategy across Reddit, email, and social media platforms, leveraging targeted content and outreach to increase app engagement, acquiring 47 new users in just three weeks.
• Redesigned the dashboard storytelling using findings from 17 visualization studies, proposing 4 new comparison and agreement focused design concepts, resulting in intuitive visual exploration and engagement.

Ingenio Care | Full Stack Developer Intern | Chicago, IL May 2025 – Aug 2025
• Architected 3 dashboards and onboarding flows for patients, providers, and consultants using React, TypeScript, Material-UI, and Redux, streamlining multi-tenant access and ensuring secure, fast experience.
• Engineered a serialization pipeline on AWS EC2 to process 10GB deeply nested JSON files, reducing processing time from 2 hours to under 25 minutes and enabling rapid internal access to pricing data.
• Implemented a Cube.js proof-of-concept with advanced pre-aggregations and in-memory caching, reducing response times for aggregation-heavy dashboard queries by 25% and enabling sub-second analytics.

3D Bakery | Self-Proprietor | Pune, India Aug 2023 – Aug 2024
• Delivered 270+ 3D printing projects, including custom FreeCAD designs, which generated ₹20K in profit, while building three self-sustaining printers and a temperature-controlled lab.

Persistent Systems | Front-End Developer | Pune, India Dec 2021 – Aug 2023
• Directed a team of three to develop a Playwright + Jest + CircleCI automation framework, reducing 4-hour cross-browser regression tests to 30 minutes and enabling faster releases and early bug detection.
• Built a custom date picker with full localization support in React, TypeScript, and Nebula.js, resolving 2K+ customer-reported date-entry issues and streamlining date selection by 38%.
• Remediated 50+ critical defects across 7 DOMO API connectors using Cypress with parameterized tests, mocks, fixtures, and network stubbing, which lowered production bug leakage by 35%.

End-of-Life Caregiver for Immediate Family Member | Nashik, India May 2021 – Dec 2021

Projects

Simpligami | <https://simpligami.onrender.com> Aug 2025 – Dec 2025
• Designed a Three.js 3D origami tutorial that aligned folds with users' perspectives, eliminating occlusion, ambiguity, and depth perception issues in 2D or video tutorials, significantly improving learning clarity.
• Enhanced learning by allowing learners to progress at their own pace, avoiding rigid video timelines, and providing guidance through repeated ghost animations, reducing beginner mistakes by 18%.

AMACSAR | <https://sar-visualization.onrender.com> Aug 2025 – Dec 2025
• Simplified potency analysis for 105 antimalarial compounds by unifying siloed datasets into a React + D3 dashboard with 5 interlinked views, enabling overview and item-level comparison approximately 4× faster.
• Enhanced accessibility of dense Parallel Coordinate Plots by implementing Mike Bostock's fisheye focus + context algorithm, revealing obscured compounds and enabling faster, accurate interaction.
